

When its valuable to have multiple dispatch points in one building, a number of i2way Desktop Remotes can provide a solution. Supported by a single rack-mounting version of an i2way Dispatch Control Station, up to ten DN-750 desktop remotes can be installed as far as 200 feet from the radio.

The remotes offer a telephone-style handset for privacy as well as a built-in panel microphone and PTT switch. A "replay" button activates the built-in i2way instant replay feature.

Parallel remotes automatically monitor both sides of a two-way conversation. DN-750 remotes do not have unit and group selection capabilities, but remain fixed on a preset group ID. The remotes use standard Cat 5 cable, pre-installed in many buildings, so installation is simple.
